

TJET500 SELF-ASSEMBLY STAND

The **TJETt500 Self-Assembly Support Kit** is a versatile piece of equipment to enable the user to achieve the best attack angle for EOD operations. It can be configured either as a 4 legged support, tripod or bipod and will hold the **TJT500** in place at the desired angle for the duration of the operation.

The self-assembly stand comprises:

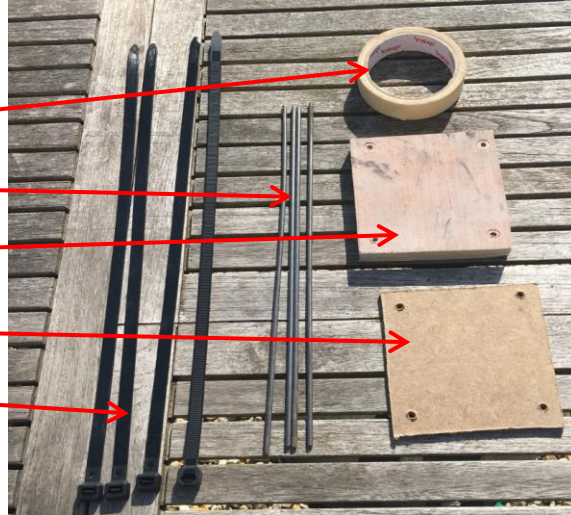

1 x roll tape per 20 stands

4 x 38cm steel rods

1 x baseplate

1 x tension plate

4 x 43 cm cable ties

The stand deployed in the 4 leg, 3 leg and 2 leg configurations against a 120 HE mortar round. The 4 and 3 leg versions can be mounted on hard ground as well as on earth or sand. The 4 x cable ties allows the operator to produce the desired angle of attack. The length of the steel rods allows for good elevation up to 30cms.
